

Dimension | Progress Report

— August 2019

Technical Progress

•Hybrid Consensus

1. The underlying code of the HPoS hybrid consensus completes the beta test.
2. RBFT has started the code development phase.
3. HPoS-P access test net was successfully coordinated.

•Dynamic Node

1. Node registration proposal mechanism enters the test phase.
2. Bugs in the join/approval/removal of the node approval process had been fixed.
3. The scheduling mechanism of underlying code DN-Core:
 - A. Broadcast mechanism code has been completed and is now in beta testing.
 - B. Buffering mechanism framework of the newly added node has entered the code implementation phase.
4. Node review process has been optimized.

•ConsensusX

1. Bugs in consensus switching proposal process have been fixed.
2. Complete access and testing of mainstream consensus algorithms.
3. Open consensus algorithm interface API is tested.
